How to log in as an organization and manage session changes

The Business API Ecosystem supports organizations as defined by the FIWARE IdM. These organizations can use the system as if they were users, being possible to create organizations catalogs and offerings or acquire them.

If the user belongs to an organization this platform makes them log as that organization. If needed, the platform allows changing the session so the user can be logged as other organizations that them belong or as the user themself. To do that, it is used the Change Session option of the user menu.
