Introduction to the DOME Digital Wallet

The **DOME Digital Wallet** is a key application for managing your digital identity within the DOME Marketplace ecosystem. It allows you to **obtain, store, and use Verifiable Credentials** that grant access and permissions across DOME applications.

Through the Wallet, users can securely manage their credentials, sign in to DOME applications, and scan QR codes for credential issuance or verification.

If your company is joining the DOME ecosystem for the first time, the **Onboarding Guide** explains how the Legal Entity Appointed Representative (LEAR) obtains the initial company credential.

Once your LEAR has issued your employee credential, follow the **Obtaining Verifiable Credentials** to retrieve it in your Wallet.

To learn how to sign in to DOME applications using your credentials, refer to the **Login Guide**.

You can access the Wallet directly by visiting **DOME Digital Wallet**.
