

A federation of European marketplaces

DOMÉ aims to create a network of European marketplaces that work together to streamline service provisioning and increase the visibility of available services. Here's how the federated marketplace concept works:

- **Integration of Services:** Each marketplace within the DOMÉ network can integrate DOMÉ catalogue services into their own offerings. This means they can select and include services from the DOMÉ catalogue to enhance their service portfolio.
- **Procurement of DOMÉ Verified Services:** Through DOMÉ, marketplaces can handle the procurement process for DOMÉ verified services offered by other marketplaces within the network. This allows for seamless access to a wider range of trusted services across the ecosystem.
- **Publishing DOMÉ Verified Services:** Marketplaces can also publish their own DOMÉ verified services through the DOMÉ ecosystem. This ensures that their services meet the verification criteria set by DOMÉ, enhancing their credibility and visibility within the network.
- **Billing and Provisioning Responsibility:** Each marketplace retains the responsibility for billing and provisioning of their own DOMÉ verified services. However, they share the transaction visibility with DOMÉ, which facilitates the economic aspects of the transactions.
- **Independent Publishing:** Marketplaces also have the freedom to publish non-DOMÉ verified services independently. This allows them to maintain their existing offerings and expand their service portfolio beyond the DOMÉ verification process.
- **Amplified Catalogue Visibility:** By participating in the DOMÉ federated marketplaces, each marketplace can amplify the visibility of their catalog by selling their validated services through the network. This provides increased exposure and potential customer reach.
